

# Quality Improvement for Hospital Epidemiology and Infection Prevention Programs: A Practical Approach

Vincent Hsu, MD MPH  
Hospital Epidemiologist  
Florida Hospital, Orlando

FIME Patient Safety & Quality Congress  
July 17, 2018

2017: Zero Accident  
Deaths on  
Commercial  
Passenger Jets

# Outline & Objectives

- Current state: the need for QI in healthcare & infection prevention
- Principles of QI, applied to Florida Hospital
- Examples of QI projects at FH
  - Improving immunization
  - *C. difficile* reduction
  - *Legionella*
  - Organisms of epidemiologic significance

# Numerical Impact of Med Errors

- Estimates: 50-400K deaths
- Heterogenous definitions
- Don't argue about numbers, get to work!

# Accountability for Healthcare Quality & Safety

- Consumers
- Payors: CMS (15% HAI)
- Legislators: public reporting
- Employers: Leapfrog (22% HAI)

The screenshot shows the Leapfrog Hospital Safety Grade website. At the top left is the Leapfrog Hospital Safety Grade logo. At the top right is a 'Join our Mailing List' button. Below the logo is a navigation bar with links: Home, What is Patient Safety?, Your Hospital's Safety Grade, What You Can Do to Stay Safe, For Hospitals, Licensure & Permissions, and About Us. The main content area features a large image of a doctor and a patient. A text box over the image states: 'You have a 1 in 25 chance of leaving the hospital with a new infection. Use the Hospital Safety Grade to find a hospital doing better on patient safety.' To the right of the image is a search section titled 'How Safe is Your Hospital?' with a search bar and a 'Search' button. Below the search section are three newsroom articles. At the bottom is a navigation menu with three categories: 'What is Patient Safety?', 'Your Hospital's Safety Grade', and 'What You Can Do to Stay Safe'. Each category has a list of links with right-pointing arrows.

# Burden of Healthcare Associated Infections

- 1 in 25 hospitalized will develop HAI (~722K)
- 75K deaths
- Pneumonia & SSIs rank #1

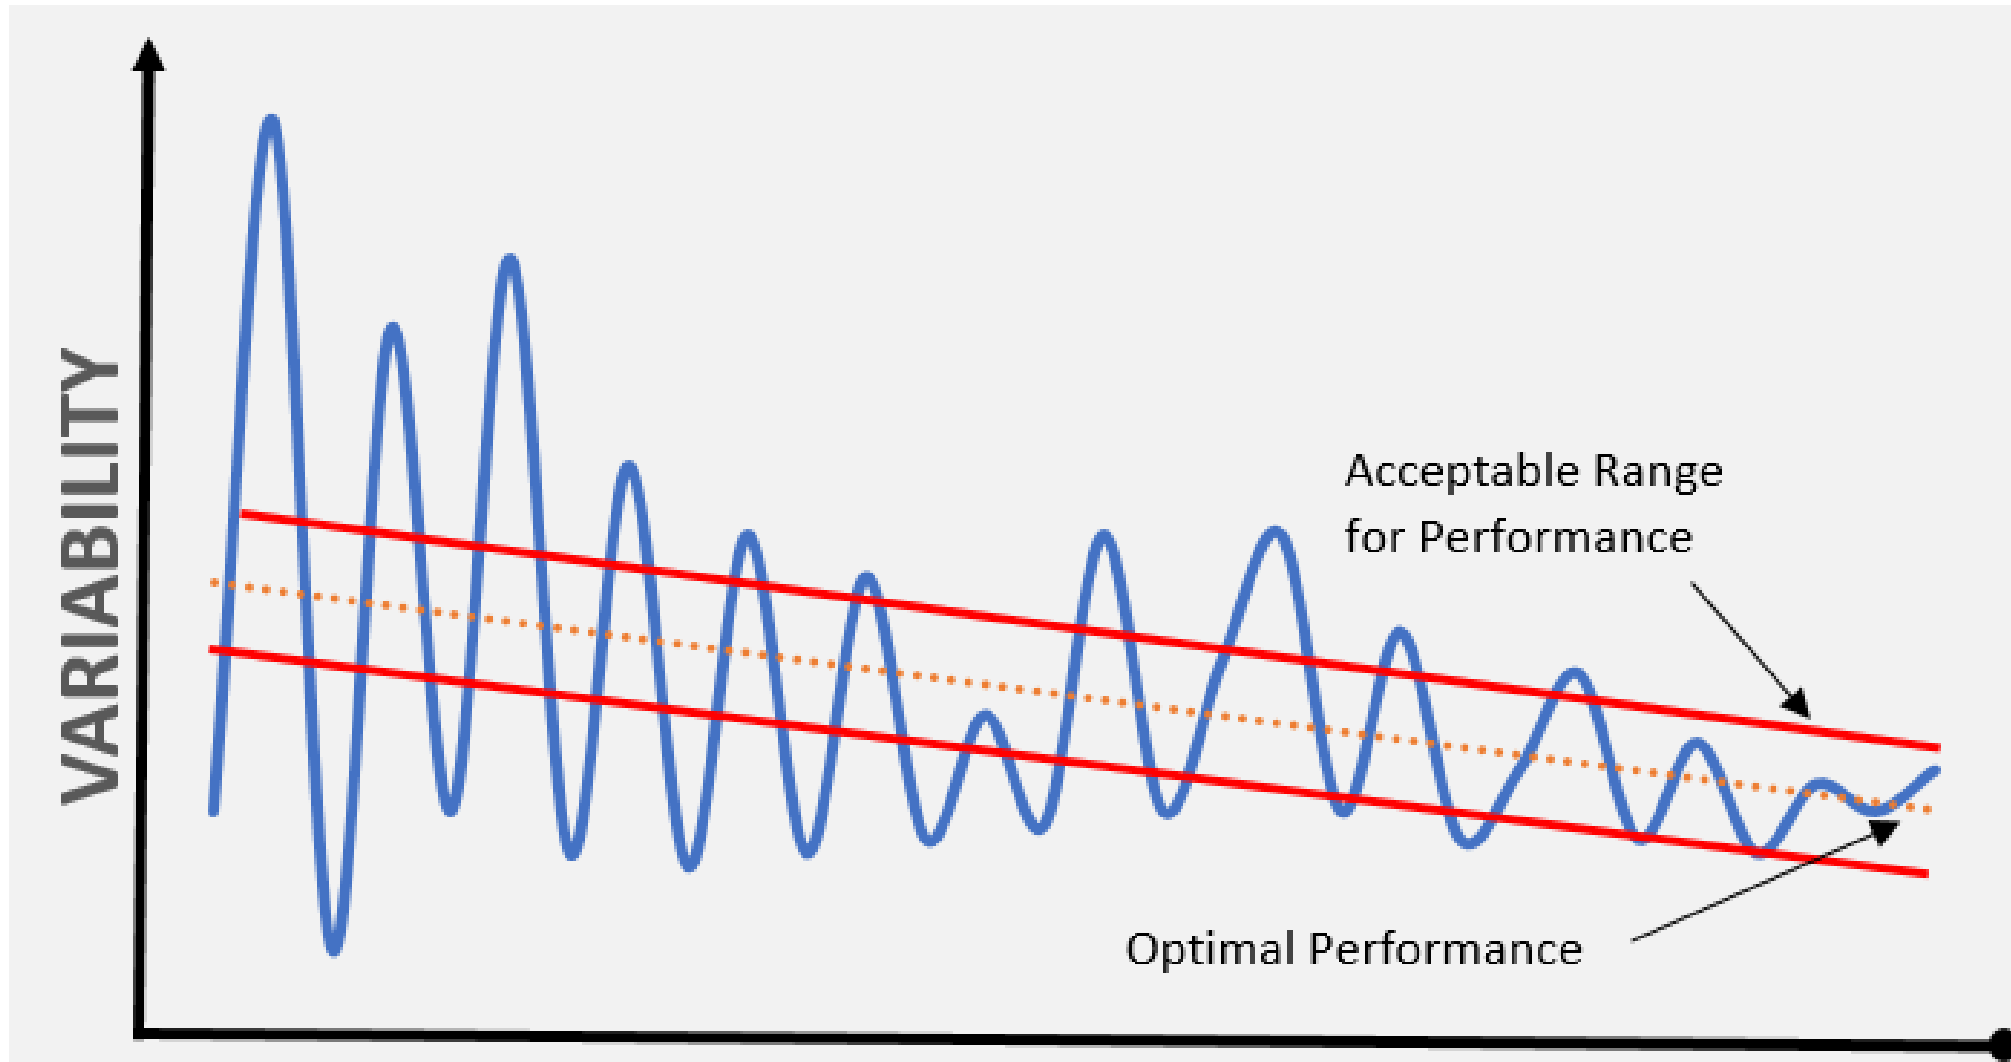

<i>Type of infection</i>	<i>Estimated number per year</i>	<i>Estimated cost per infection</i>	<i>Most common microbiologic etiologies</i>
Surgical site infection	157,500	\$12,000 to \$35,000	<i>Staphylococcus aureus</i> , coagulase-negative staphylococci, <i>Escherichia coli</i>
Catheter-associated urinary tract infection	93,300	\$1,000	<i>E. coli</i> , <i>Pseudomonas aeruginosa</i> , <i>Klebsiella</i> species
<i>Clostridium difficile</i> infection	80,400	\$6,000 to \$9,000	<i>C. difficile</i>
Central line-associated bloodstream infection	71,900	\$7,000 to \$29,000	<i>S. aureus</i> , coagulase-negative staphylococci, <i>Enterococcus</i> species
Ventilator-associated pneumonia	49,900	\$20,000 to \$29,000	<i>S. aureus</i> , <i>P. aeruginosa</i> , <i>Klebsiella</i> species

Magill SS et al. N Engl J Med. 2014;370(13):1198-1208

Table from Hsu VP. Prevention of Health Care-Associated Infections. Am Fam Physician 2014;90(6)

# Greatest Threat to Healthcare: Variability

- Care-delivery processes are not standardized, are dependent on individuals, which leads to errors.
- The technology is the easiest part
- The hard part is how to get the doctors, nurses, and administrators to agree on what is the best way to deliver the care

Harvard  
Business  
Review

# Why Process Is U.S. Health Care's Biggest Problem

by John S. Toussaint and Kathryn Correia

MARCH 19, 2018

# The Case for Quality Improvement: It's Here and Works!

- Systematic, continuous actions leading to measurable improvement in performance of healthcare services
- Basics
  - Analyzes data
  - Establishes culture of quality
  - Determines & prioritizes potential areas for improvement
  - Ongoing evaluation
  - Communicate & spread successes

# About Our Facility

- Nine-campus system with 2,247 acute care beds
- 120K admissions, 500K ED visits
- Committed to safety & improved patient outcomes
- Infection prevention program focused on HAI and outbreak prevention

# How We Approach QI Improvement

**Team**

## **CHOOSING A TOPIC**

- What is the impact?
  - Mortality
  - Reimbursement
- What is the necessity?
- Is it measurable?
- Is it feasible?

## **STEPS**

- Leadership support
- Define scope, objectives, goals, team
- Develop strategies, assess barriers
- Implement, measure and analyze
- Feedback
- Reincorporate lessons learned

QI Area #1: Low Vaccination  
Rates in the Ecosystem

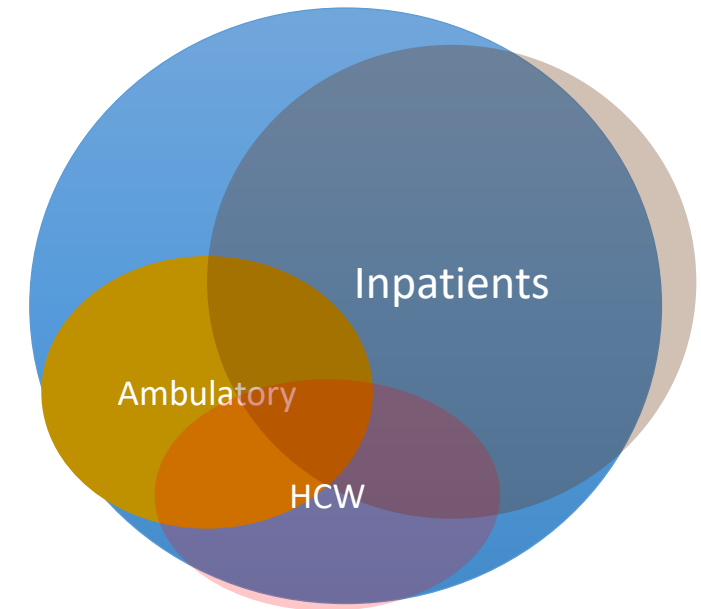

# Proportion of Adults Receiving Vaccines

## US National Health Interview Survey, 2010-15

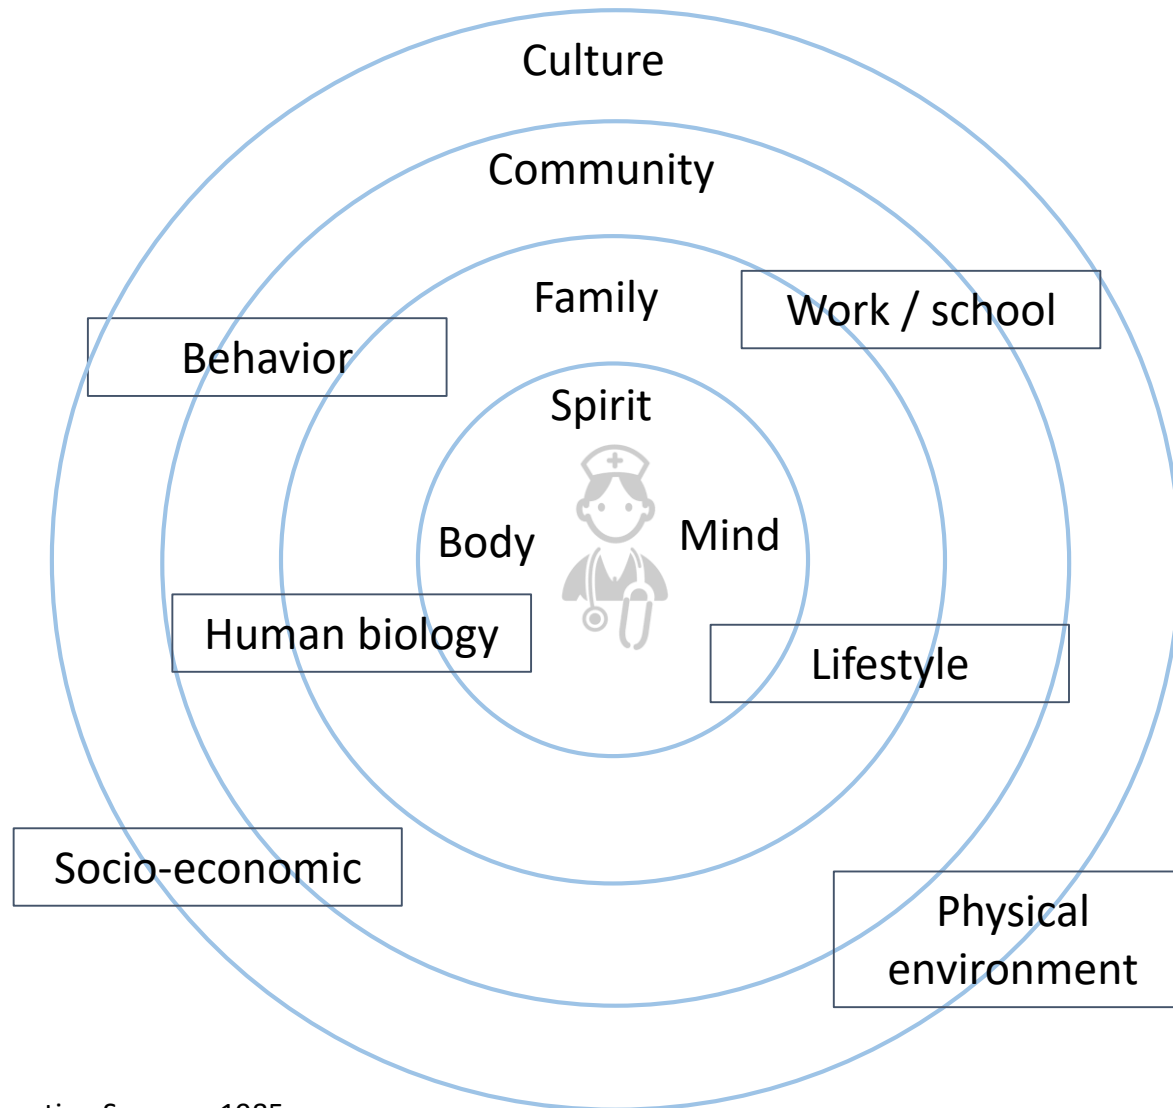

# Defining Scope & Getting Leadership Support for Each Ecosystem

- Leadership: operational, clinical champion, who is accountable
- Inpatients & healthcare workers (HCW)
  - Rationale: regulatory, standards of care, reimbursement
  - Inpatients: new process change (pneumococcal, flu)
  - HCW: how to make more available, enhance current process (TdaP, flu)
- Ambulatory: residency program & clinic director (TdaP, flu, pneumococcal, zoster)

# Developing Strategy: Determinants of Health

# Strategy: Assess Barriers & Opposition to Vaccines

 **National Vaccine Information Center**  
Your Health. Your Family. Your Choice.

# Barriers to Immunization

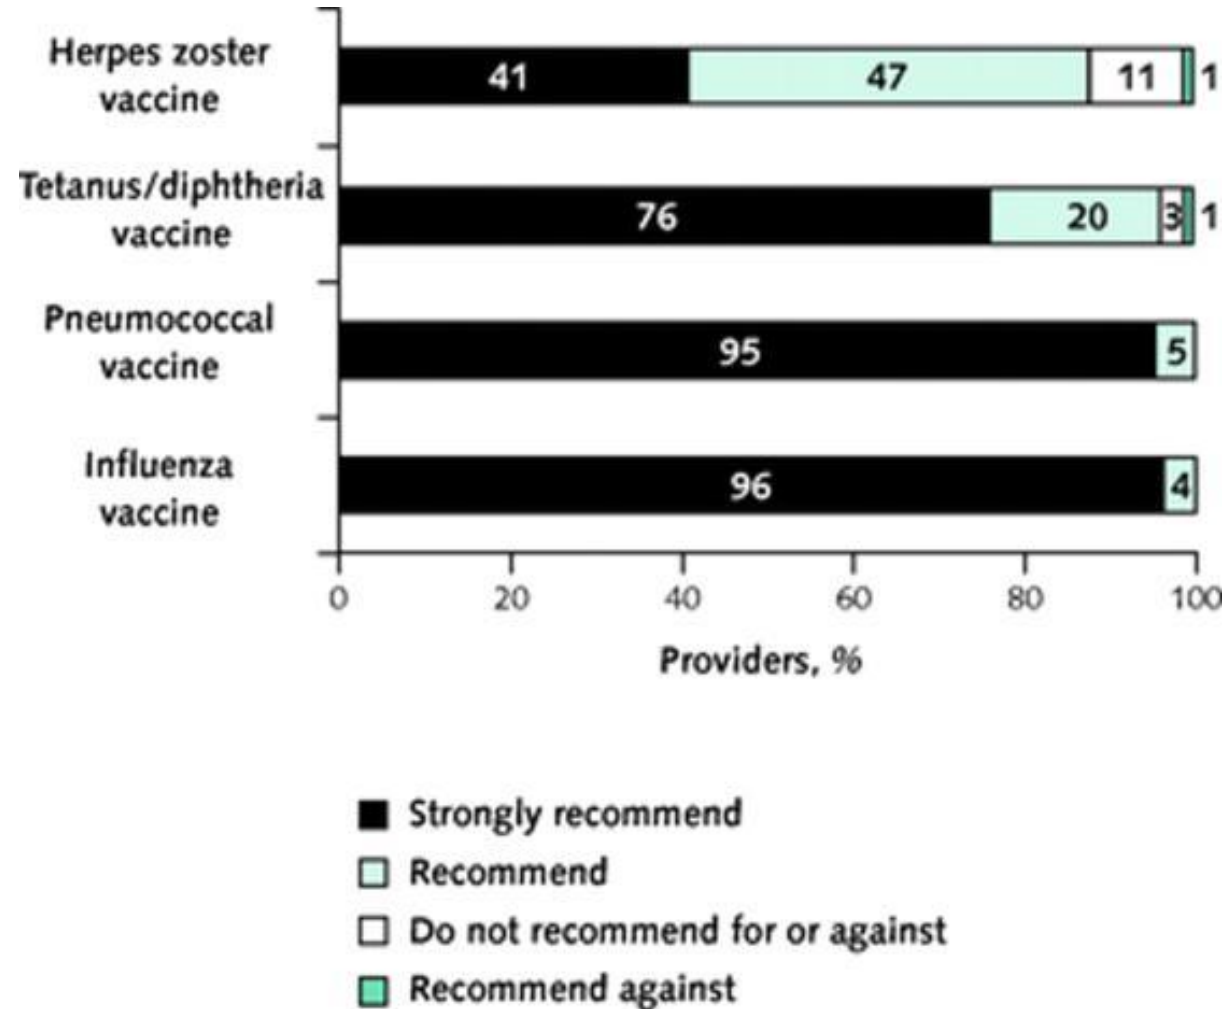

## Patient Barriers

- Economic
- Lack of access
- Mistaken assumptions
  - Efficacy/safety
  - I don't need
  - Educational deficit
- Provider did not recommend

## Provider Barriers

- Economic
- Lack of a system
- Lack of time
- Patient refused
- Provider did not recommend
  - Training / culture
  - Low priority
  - Apathy

# Strategy: Make Strong Recommendation for Vaccine

Ding H, et al. *Am J Obstet Gynecol.* 2011;204(6 Suppl 1):S96-S106.

Hurley LP. *Ann Int Med* 2010; 152:555-560 Accessed at <https://annals.org/article.aspx?articleid=745758>

# Strategy: Standing Orders Are Effective in Improving Rates!

- Written protocols approved by authorized practitioner
  - Assess patient's need for vaccination
  - Administer vaccine without clinician's direct involvement at time of interaction
- Most effective single approach to improve adult vaccinations, yet utilized in less than 50% of providers
- Consists of assessment, documentation, management of medical emergency, adverse events, authorization
- Nurses design protocols, counsel patients, administer vaccine

# Florida Hospital Employee Influenza Vaccination Rate, 2000-15

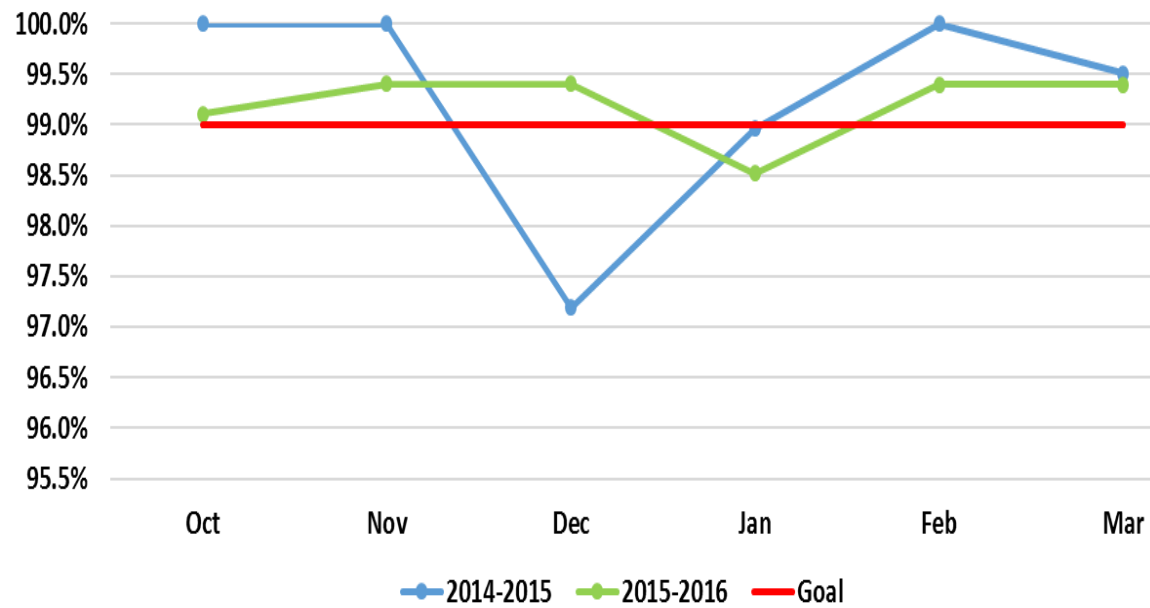

# Redesign What Doesn't Work. If Patient Refuses

- Patient refusal does not necessarily mean opposition
- Assess barriers, listen to concerns
  - Financial
  - Pain with multiple vaccines
  - Specific vaccine
- Explain, but avoid pushing the issue
  - Scientific-clinical data, anecdotes, graphic images failed to sway parents opposed to MMR
  - Mixed results with HCW flu vaccination despite education, counseling
    - Randomized cluster trial: no change in flu vaccination rates among HCW using personalized counseling and education (FH unpublished data)

# Despite Regulatory Compliance, Opportunities Exist to Improve Inpatient Flu Vaccination Rates

Percentage of Eligible Inpatients Offered Flu Vaccine, Florida Hospital, 2014-16

Flu Vaccine Inpatient Immunization Rates, Florida Hospital, 2014-16

- Hospital reported high compliance in offering inpatient flu vaccines to US Centers for Medicare & Medicaid
- Did not translate into significant vaccination rates, despite adding nurse scripting for 2015-16 season
- Need a redesign of inpatient vaccination process to improve rates

# Designing a Community Initiative to Improve Adult Vaccination Rates

- Started 2016 October; in progress
- Orlando has many of the essential ingredients
  - Two large healthcare systems
  - Champions & administrative support
  - Relatively low vaccination rate
  - State vaccination registry: Florida Shots
- Objective: Implement an integrated community partnership approach to improve vaccination rates

# Designing Community Initiative, continued

- Potential strategies
  - Community summit
  - Reach out to consumers: marketing, advertising, social media, doctor's offices
  - Provider education & initiative: vaccination workshop
- Potential partners (stakeholders)
  - Private healthcare systems, including ambulatory
  - Industry
  - Pharmacies
  - Community health centers
  - Department of Health
- Opportunities
  - Scope: which stakeholders, which immunizations
  - Measurement: before & after rates, # of vaccines utilized

QI Area #2: Reduce High  
Healthcare-Onset *C. difficile*  
Rates

# Impact of *C. difficile* Infections

- 15-30% of antibiotic-associated diarrhea
- 250-500K / year; 11K to 29K deaths annually
- 70% of all acute gastroenteritis deaths, mostly among 65 and older

# The Problem with HAI *C. difficile* Infections

- Most cases due to expression of delayed onset disease from colonization, NOT hospital transmission
- Most cases of hospital-onset diarrhea are NOT CDI – laxatives, TF, antibiotics, etc
- Testing using PCR is extremely, maybe too sensitive
- Overtesting leads to overtreatment, overreporting, financial penalties

# What is Diarrhea? Bristol Stool Form Scale

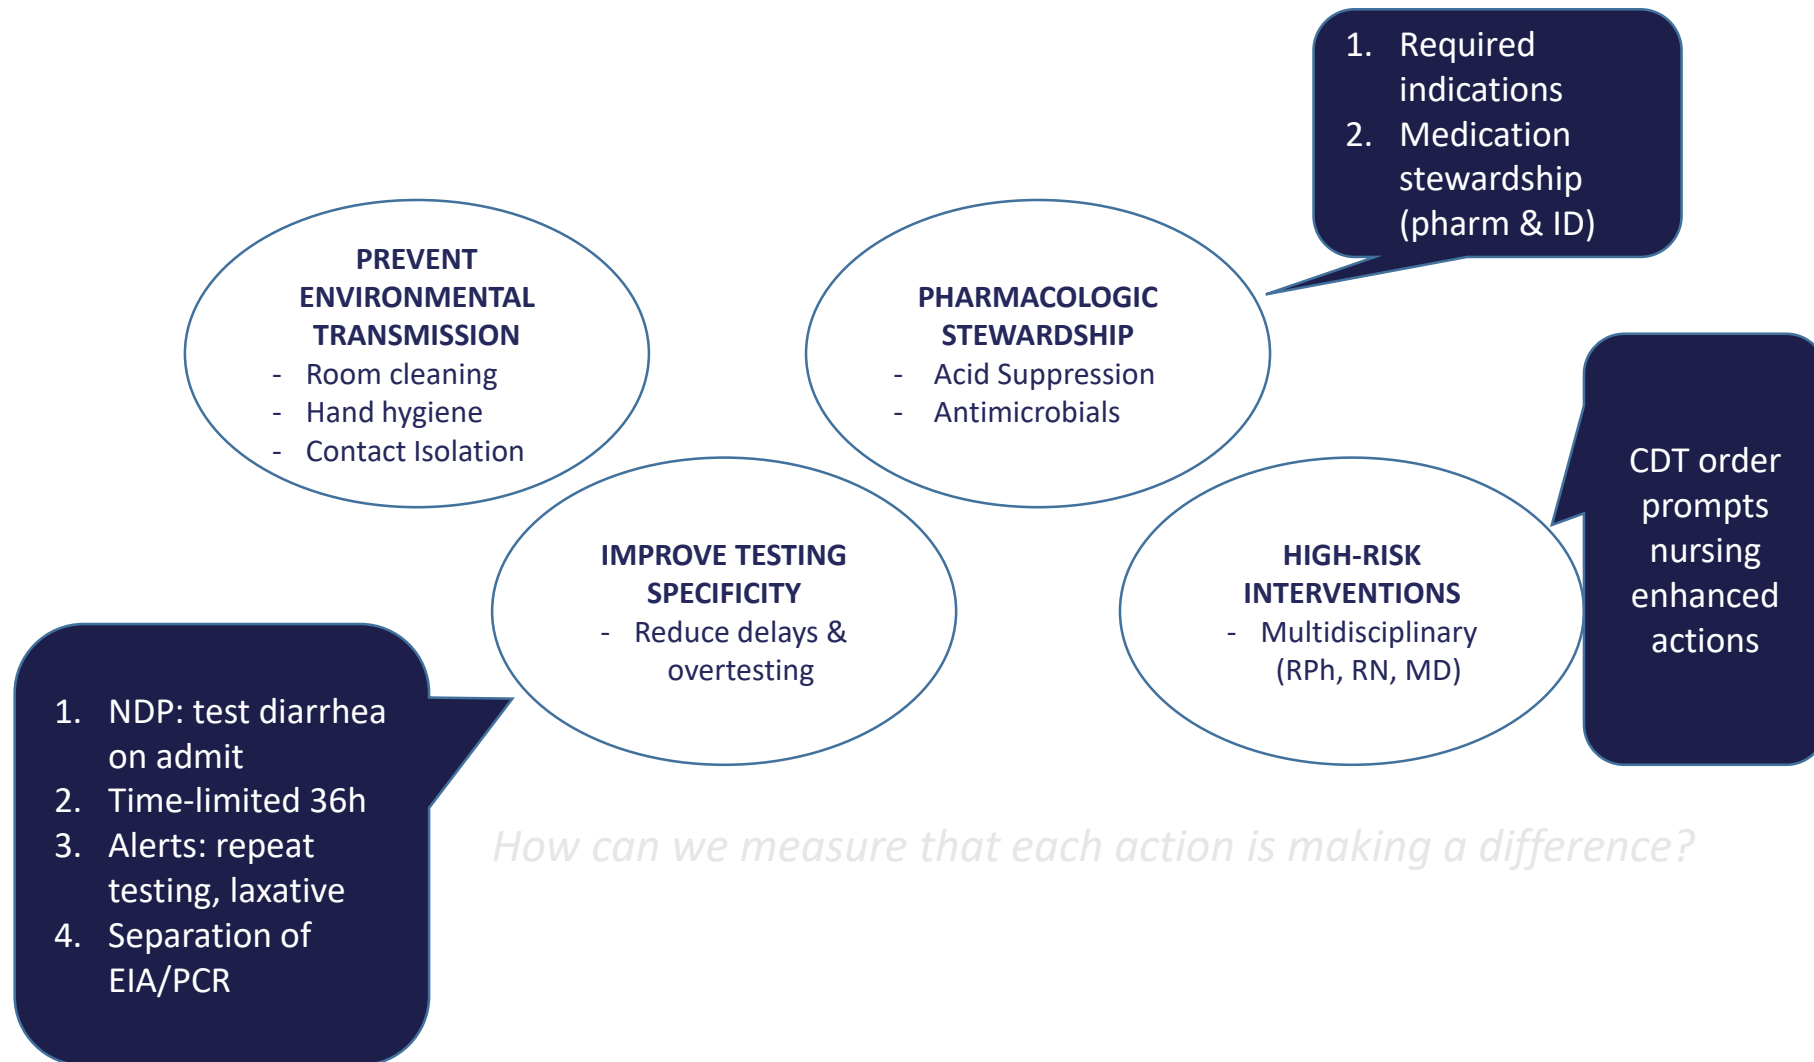

<p><b>TYPE 1</b></p> <p><b>Rabbit droppings</b></p>  <p>Looks like separate hard lumps, like nuts (hard to pass)</p>	<p><b>TYPE 2</b></p> <p><b>A bunch of grapes</b></p>  <p>Looks like a sausage-shape but lumpy</p>	<p><b>TYPE 3</b></p> <p><b>Corn on cob</b></p>  <p>Looks like a sausage but with cracks on its surface</p>
<p><b>TYPE 4</b></p> <p><b>Sausage</b></p>  <p>Looks smooth and soft like a sausage</p>	<p><b>TYPE 5</b></p> <p><b>Chicken nuggets</b></p>  <p>Looks like soft blobs with clear cut edges (passed easily)</p>	<p><b>TYPE 6</b></p> <p><b>Porridge</b></p>  <p>Looks like fluffy pieces with ragged edges, a mushy stool</p>
<p><b>TYPE 7</b></p> <p><b>Gravy</b></p>  <p>Looks watery, no solid pieces (entirely liquid)</p>	<p>Guideline: 3 or more unformed stools within a 24 hour period</p>	

**BRISTOL STOOL FORM SCALE**

# Forming the Team

- Requires administrative support
- Team members and roles
  - IP: The “glue”, sets expectations, metrics
  - Pharmacist: reviewing indications and appropriateness of AST, abx
  - EVS: staffing ratio, standardized process, monitoring
  - Lab: rejecting formed stool, testing algorithm
  - Nursing: assess clinical symptoms
  - Physicians: Judicious testing, use abx, AST only when necessary, therapy

# Reducing HO-C. *Diff* at FH: Four-Pronged Strategy & Summary of Actions

# Environmental Cleaning at FH

- Focus on traditional cleaning
  - Evaluating but not yet adopted UV-C
  - Sporicidal agent
  - Standardization of process
- Expectations & accountabilities
  - Staff ratio
  - Cleaning time
  - Management bonus
  - Metrics: internal & external audit agreements
    - ATP
    - Process

# Learning from Industry

FH System; Source-NHSN

# Hospital Onset *C. difficile* Rates, Jan 2015-Oct 2016

# System CDI RATE

# QI Area #3: Developing a Water Management Program

# The Sentinel Event

- Prior to 2016, FH had no specific Water Management Program (WMP)
  - No issues with hospital-onset *Legionella* cases
  - Managed water-borne outbreaks; sterile water where appropriate
  - Facilities: ensured availability of potable water where needed
- November 2015: reported to FLDOH-Orange a case of possible hospital-onset legionellosis
- January 2016: FLDOH-Orange requested and conducted water tests in Ginsburg Tower
  - 2 of 4 water samples positive for *Legionella*
  - Enhanced DOH investigation is opened

## LOCAL & STATE

# Hospital takes steps after Legionella tests

BY NASEEM S. MILLER

Staff Writer

Florida Hospital Orlando's water tested positive last week for the respiratory germ Legionella, leading the hospital to hire a firm to flush its water system.

Hospital officials said there are currently no confirmed cases of hospital-acquired Legionnaires' disease. They added the hospital's water is safe to drink.

As a precaution, the hospital is testing at-risk patients for the infection and has instructed the staff to follow certain measures to prevent vulnerable patients from potential exposure to the germ.

The chain of events began late last year, when a critically ill patient at Florida Hospital Orlando tested positive for Legionella.

The hospital notified the Florida Department of Health, which tested the hospital's water and confirmed on Jan. 13 that the water had tested positive for the bacteria.

The hospital hired water management and Legionella-testing firm Phigenics to flush its water system, a process that will take several weeks.

Florida Hospital officials said the strain of Legionella found in the hospital water system is different from that of the patient last year, so it's not clear where

the patient was infected.

They did not disclose the patient's condition, citing patient privacy laws.

"We know that Legionnaire's disease is something that we have to keep in the back of our minds for patients who have a weak immune system," said Dr. Vincent Hsu, hospital epidemiologist at Florida Hospital. "We've educated our physicians on signs and symptoms of the disease and we always want to encourage our providers to be on the lookout for it."

The Legionella bacteria is found in fresh water. It also thrives in warm water, like the water in hot tubs, large plumbing

systems or air conditioning systems of large buildings. Hsu compared the bacteria's presence in the water with the presence of other germs in the environment that could cause food-poisoning under the right conditions.

If Legionella-contaminated water is breathed in, it can infect the lungs and cause pneumonia, or what's known as Legionnaires' disease. The disease is not transmitted from person to person and it doesn't sicken the majority of people who are exposed to it.

Signs of the disease can include high fever, chills and cough. Some people also suffer from muscle aches and headaches, and some will have gastro-

intestinal symptoms, according to the Florida Department of Health.

The infection can be successfully treated with antibiotics, but it can pose a high risk to older adults, smokers and people who have a weakened immune system.

Each year, between 8,000 and 18,000 people in the United States need care in a hospital due to Legionnaires' disease, according to the CDC.

Hsu said that Florida Hospital Orlando has had no cases of hospital-acquired Legionella infection in recent history.

# Media Coverage

# Timeline of Events – Feb-March

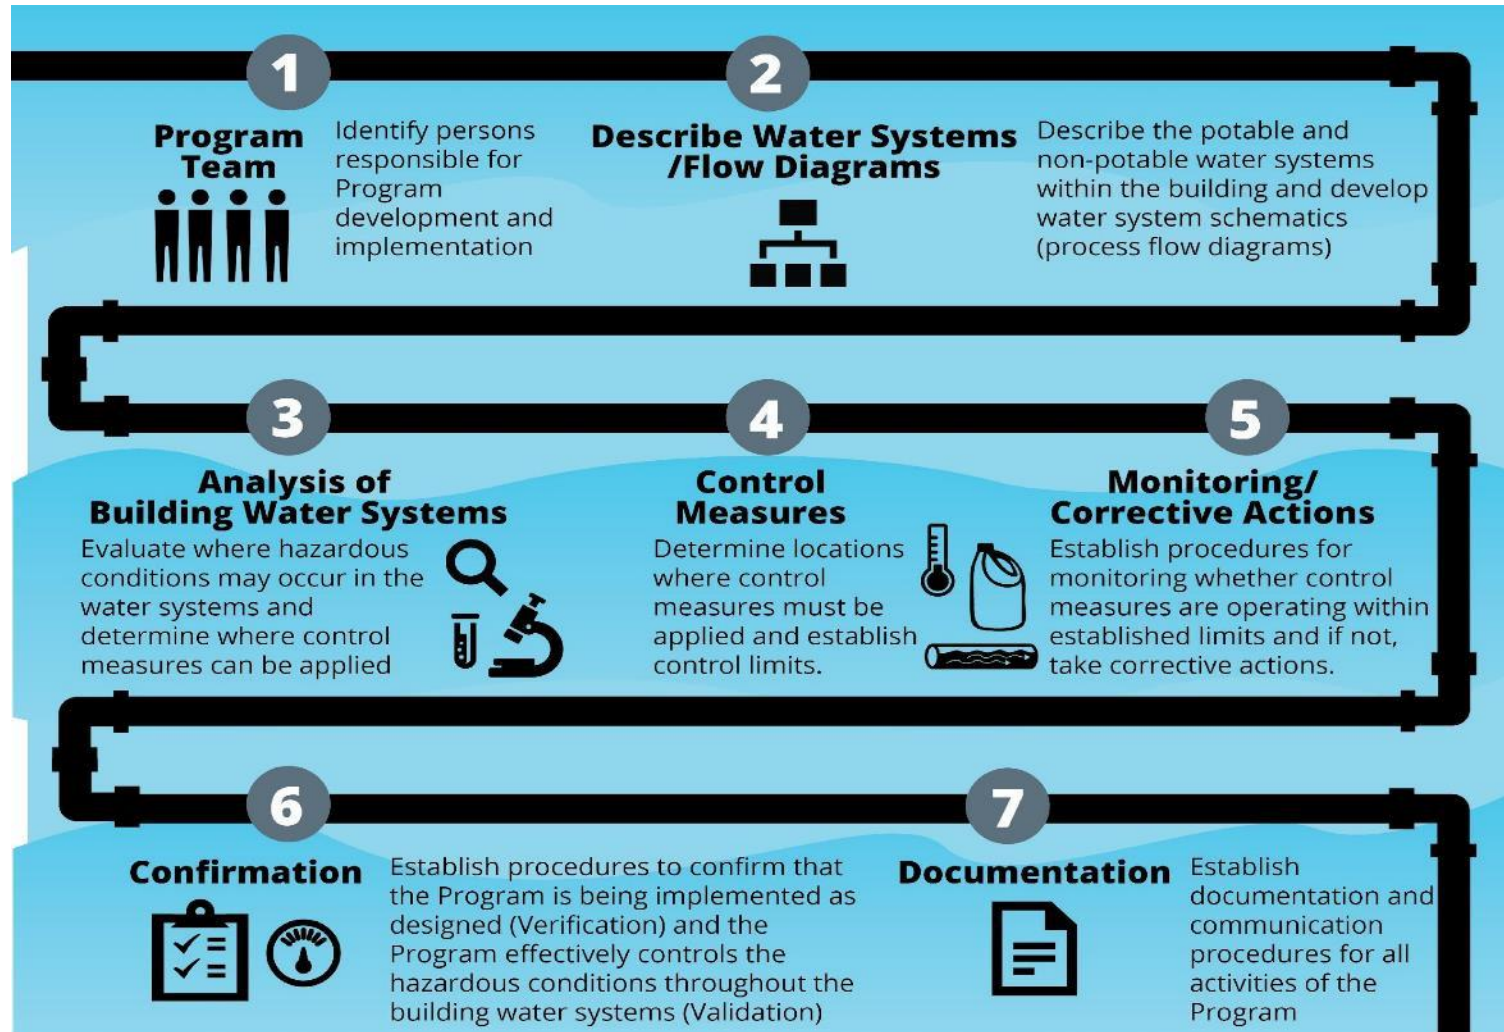

- February

- First round of environmental water testing begins: 14 of 30 samples positive for Legionella. Flushing of fixtures by EVS begins. Formal water management team created and convenes
- Second round of tests: 1 of 30 samples positive

- March

- Chlorine injector installed in some non-Ginsburg areas of FHO
- Third round of tests - all samples negative.
- FLDOH-Orange formally closes enhanced investigation; no cases of hospital-onset *Legionella* were confirmed during this time period

# Approach to Effective Water Management Program Using HACCP Principles at FH

Requires thoughtful, stepwise program based on scientific evidence

- Defensible & documentable
- Complies with regulatory requirements and standards (SDWA, OSHA, ASHRAE)

# Immediate Actions (1)

- Work with reputable organization without ties to products
- As FH had no confirmed cases of hospital-onset Legionella, assess but don't make matters worse
  - Start slow, simple is better
  - Hyperchlorination or superheating could make things a lot worse
- Communication
  - Medical staff and leadership notified
  - Media plan is developed

# Immediate Actions (2)

- Surveillance
  - Active surveillance for *Legionella*
  - Strain typing of patient and water samples
- Facilities
  - Point of use filters installed and shower bans implemented in high risk areas; some auto faucets changed out to paddle.
  - Hot water temps and hot water chlorine levels found to be low, flushing in utility areas begins at 100%
- Scope
  - Focus on Ginsburg Tower
  - Begin planning to assess all campuses and start a WMP

# Approach to WMP at FH: The WMT

- Water Management Team Members

- Senior VP – facilities & clinical
- Facilities director (system / campus)
- EVS director
- Clinical: Hospital epidemiology, infection prevention, patient safety
- Phigenics

- WMT meets monthly, two subcommittees

- Mission: To prevent and control waterborne-associated healthcare risks, including *Legionella* disease, to all patients, visitors, and employees at FH

# Control Measures & Verification/Validation at FH

- Remediation of dead legs – ongoing, as identified
- Recalibrated water temperature
- Replaced auto fixtures that might be faulty
- Flushing – critical component. Flushed distribution lines and fixtures to ensure fresh chlorinated water
- Installed chlorine injectors if reasonable flushing did not raise the biocide levels within acceptable range
- Verification/Validation. Kept log of all data. Will sample for *Legionella* at specified times and locations in accordance with plan

# Monitoring Program includes both environmental testing and patient surveillance

## Environmental

- Temp
- Oxidant

## Clinical Surveillance

“The health security of the U.S. is only as strong as the health security of every country around the world. We are all connected by the food we eat, the water we drink and the air we breathe.” – Tom Frieden

Texas Health Presbyterian

# PH-Acute Care Collaborative Efforts During Ebola, 2014-15

- DOH coordination of persons from W. Africa
- Frequent regular conference calls, written updates
- Establishment of protocols with industry (e.g. Disney, MCO), multi-governmental organizations
- Participation in drills
- Establishment of DOH ICAR through the Central Florida Disaster Medical Coalition

# Zika, 2016-present

- Less risk, but resource-intensive
- ED screening processes
- Identification and follow-up of pregnant women through birth

# Novel Respiratory Viruses

- Middle East Respiratory Syndrome Coronavirus (MERS-CoV)
  - May 2014, Orlando
  - FL DOH & CDC joint effort with Orlando Health
  - Updated case definitions
  - Area EDs: Travel question
- Pandemic influenza
  - Coordination of plans
  - Drills

CDC: Cynthia Goldsmith Azaibi Tamin

# Amoeba Awareness: Jordan & Sebastian

- PAM: “Rare” disease
- DOH, Smelski Foundation, and Florida Hospital collaboration
  - DOH & Foundation: highly publicized and supported
  - FH: Educated clinicians, laboratory technicians, built in questions into the medical record, positive media exposure

# Next Steps & The Future of QI

- No matter the future of IP, no matter what field of healthcare you are in, QI principles remain solid
- Leadership, scope, objectives, goals, team, strategies, implement, measure, analyze, feedback, improve
- Discuss
  - What are your priorities and objectives to keep patients safe?
  - What will you do now?
  - How will you get there?
